

TITLE of the INVENTION

"Method and device for alerting during progressive decoding of a digital image coded with a region of interest"

TEXT of the ABSTRACT

The invention relates to a method for alerting during the progressive decoding of a digital image coded with a region of interest, characterised in that it includes the stages of:

- detection (E13) of the end of the decoding of the said region of interest,
- activation (E14) of an indication of the end of decoding of the said region of interest.
